

LIBERATECa™

LiberateCa™ is a premium calcium fertilizer intended to provide superior compatibility and flexibility for mixing and application. LiberateCa™ is compatible with most AgroLiquid products, including Pro-Germinator®, providing application flexibility and options not possible when using other calcium products. In addition to compatibility with other AgroLiquid products, LiberateCa™ generally has good compatibility with crop protection products, making it well-suited to use in foliar treatments as well as soil applications.

Technical Data

DIRECTIONS FOR USE

LiberateCa™ is specially chelated with Flavonol Polymer Technology to avoid reaction with phosphorus in mixing, providing superior flexibility and options for application. It is well-suited to use in-furrow as part of a row starter package for corn, or other row crops, to promote firmness of fruit in horticultural applications, and to decrease the potential for blossom end rot in tomato production.

LiberateCa™ can be applied:

- with versatile planter placement options
- as a sidedress
- through fertigation
- foliar application

After several days in a mixed solution with other products, the effects of chelation may dissipate, resulting in the development of sediment. To avoid this, mix only the amount needed for a single application.

Consult your AgroLiquid representative for specific mixing, use recommendations, and rates.
