

Micro 500™

Micro 500™ is a balanced combination of five essential micronutrients: zinc, manganese, iron, copper, and boron. Zinc, manganese, iron and copper are key components of chlorophyll production and are critical for photosynthesis. All of them are needed during the early development of the crop, with boron being needed most during pollination. The proprietary technology contained in Micro 500™ allows for improved uptake and assimilation by the crop. Long-term replicated research using Micro 500™ has shown it to be an ideal combination with all fertility programs.

DIRECTIONS FOR USE

Micro 500™ may be used as a micronutrient additive in any fertilizer application method. Each crop has minimum requirements for micronutrients in specific proportions to each other. The synergy of applying the combination of the nutrients found in Micro 500™ benefits most cropping programs and soil types.

Micro 500™ can be applied:

- with versatile planter placement options
- as a side-dress
- as a foliar application
- through fertigation

Technical Data

Weight Per Gallon @ 68° F	9.83 lbs / gal
Specific Gravity	1.178
pH @ 68° F	6.93
Freezing Point20° F

Composition

Guaranteed Analysis:

Boron (B)	0.02%
Copper (Cu)	0.25%
Iron (Fe)	0.37%
Manganese (Mn)	1.20%
1.20% Water Soluble Manganese (Mn)	
Zinc (Zn)	1.80%

Derived from: Sodium Borate, Copper Sulfate, Ferrous Sulfate, Manganese Sulfate, Zinc Sulfate

Warning: Contains boron. Do not use on boron-sensitive crops. Use only according to the directions given by a trained AgroLiquid soil specialist.

For proper agronomic application rates suitable for your geographical area or the maximum allowable non-nutrient application rates per acre, consult a trained soil specialist at AgroLiquid.
