

Kalibrate[™] is a chloride- and hydroxide-free potassium solution that contains sulfur. It can be used in combination with Pro-Germinator[®] and other AgroLiquid products to provide a complete, balanced fertilizer program. Kalibrate[™] is specially formulated to resist freezing and comes back into solution without heat or agitation even when freezing has occurred, making it well-suited for fall and early-season delivery in northern climates.

DIRECTIONS FOR USE

Kalibrate $^{\text{\tiny M}}$ can be used in virtually any cropping situation where potassium is recommended. Kalibrate $^{\text{\tiny M}}$ should be used under normal planting conditions, where soil temperatures permit proper germination.

Kalibrate[™] can be applied:

- · with versatile planter placement options
- · broadcast or banded over the top of the seed zone
- · as a topdress
- · as a sidedress
- · through fertigation

In general, where liquid fertilizers such as Kalibrate[™] are applied in horticultural crop production, it is customary to split the seasonal fertilizer needs into a number of smaller applications. In this case, Kalibrate[™] may be used for early-season potassium, while AgroLiquid Sure-K[®] may be more appropriate for mid- and late-season application. Kalibrate[™] is not recommended as a foliar.
