

Fertilizer Application Options for Winter Wheat

Planting winter wheat is easy. Getting it fertilized for high yield should be too. **Well it is!** Choose the option that works best for you.

Replicated plots were 290 feet long, and planted on October 13, 2010. Fall broadcast application was on November 1. Note: Despite the range in treatment yields, there were no statistically significant differences in the fertilized treatment yields. So all options were equal.
