P2O5	150	4.1 oz per plant ~300 GPA	Sure-K @ 1 GPA
K20	160		Micronutrients @ 1.25 GPA

Start and finish your plants with AgroLiquid for better yields

- Transplant solutions (setter water) can be the first fertilizer application many plants receive. Utilizing products with low salt-index values can promote early establishment for higher yield potential.
- Pro-Germinator™, Sure-K™ and Micro500™ can provide low salt, nutrient balanced applications for pre-plant bands, transplant solutions, side dress, drip irrigation or even foliar nutrition for your crops.
- The major application of nutrients for these comparisons were applied pre-plant, see the 2012 research report for complete details on these and other fertility comparisons.
