

Sure-K®

Sure-K® is a clean, chloride- and hydroxide-free potassium solution. It can be applied in combination with other crop production or protection products and presents a very low risk of crop injury. Sure-K® can be used in any cropping situation where potassium is needed. Sure-K®'s unique formula provides increased crop utilization, allowing lower total product application volume to produce the same results as other conventional potassium fertility products when applied at typical rates.

Technical Data

DIRECTIONS FOR USE

Sure-K® is the ideal product for supplying potassium to your crops.

Sure-K® can be applied:

- with versatile planter placement options
- broadcast or banded over the top of the seed zone
- as a topdress or sidedress application
- as a foliar treatment
- through fertigation
- with crop protection products

Sure-K® can provide season-long potassium fertility depending on soil conditions, type of application, and rate. Broadcast applications to the soil may reduce Sure-K®'s efficiency. Sure-K® will not return to solution if it freezes.
